Outdoor and home backup power source. 3200Wh with 3000W rated wattage, surge 6000W. LiFePO4 battery with more than 3000 life cycles to 80%. 15 output ports for multiple devices. With max solar input of 200W, this power station can be connected to a 100W or 200W solar panel.

Inverter watt load / solar panel watt output + 10% = solar panel array. In this example we will use a 300 watt solar panel: $2500 / 300 = 8.3$. $8 \times 300 \text{ watts} = 2400 \text{ watts}$. Add 10% and you get 2640 watts. Round that figure off to 2700 watts. $9 \times 300 = 2700$. A 9 x 300 watt solar array can run a 2500W inverter load, even with energy losses factored in.

Solar panel rating also does consider energy losses in the inverter. The distance between the solar panel and battery cables also results in energy loss. Most 250W solar panels reach up to 85% of its rated output, or about 200W. A 250W solar panel that produces 200W is good for 1000W daily with 5 hours of sunlight. $200 \times 15 = 3000$. And if the ...
