To figure out how much solar power you'll receive, you need to calculate solar irradiance. This can be calculated using: $E = H * r * A$. Where: E = energy (kWh) H = annual average solar radiation (kWh/m²/year) r = PV panel efficiency (%) A = area of PV panel (m²;) For example, a PV panel with an area of 1.6 m²;, efficiency of 15% and annual ...

The Maximum Power Current rating (I_{mp}) on a solar panel indicates the amount of current produced by a solar panel when it's operating at its maximum power output (P_{max}) under ideal conditions. In other words, I_{mp} reflects how much electrical current a panel can provide when exposed to the optimal amount of sunlight and performing at its best.
