Join the Movement Doing Your Part to Help Solve Plastic Pollution. While our plastic circularity technology converts hard-to-recycle plastics into Infinitely Renewed Plastics(TM), there's plenty more we can all do in our everyday lives to promote more sustainable practices and decrease our carbon footprints.

The other 90% are either mismanaged and buried in landfills, sent to incinerators, or end up in our environment as litter polluting our land, rivers, and oceans. But imagine if all plastics could be recycled. At Alterra, we convert plastics back into their original building blocks to produce new plastics and other valuable products.

At Alterra, we convert plastics back into their original building blocks to produce new plastics and other valuable products. We're disrupting the traditional thinking that used plastic should be discarded and helping people see that plastics are valuable and designed to become new again. ... Alterra Energy is an equal opportunity employer ...

The three have signed a collaboration agreement under which Alterra and Neste will serve as technology providers, with Technip Energies designing, engineering and delivering the plant solutions to parties interested

The advantages of our plastic circularity technology help offset the need for fossil fuels to create new plastic products. That's because while traditional recycling involves a physical change in the recycled material without changing the polymer composition, our technology actually breaks down recycled material into its original chemical ...

Alterra Energy, Neste, and Technip Energies have signed a collaboration agreement to advance plastic circularity by providing a standardised technology solution for chemical, or "advanced," recycling. ... This intermediate product can then be further refined into high-quality raw materials for new plastics and chemicals. Neste has already ...

At Alterra, we imagined an infinitely renewable plastics economy and created a plastic circularity process to make it happen. We engineered, designed, and built the world's first truly continuous plastic circularity plant to solve plastic pollution. That's how we do it in Akron, and now you can too -- anywhere in the world.

Alterra Energy, Neste, and Technip Energies have signed a collaboration agreement to advance plastic circularity by providing a standardised technology solution for chemical, or "advanced," recycling.

Alterra, located in Akron, Ohio, is one of the many advanced recycling facilities that can take harder-to-recycle plastics, like snack packages, and give them a new life. "The idea for us is to go after hard-to-recycle, end-of-life plastics that ...

Alterra has that technology today. It's proven, it's operational, and it's ready for deployment globally. Go online with a facility featuring Alterra's technology and create a timeless resource through Infinitely Renewed Plastics(TM).

Today, less than 10% of plastics are recycled, but with Inficycling(TM), your plastics can be renewed, helping that 10% continue to grow. Inficycling keeps plastics out of the environment, out of landfills, and in the

Alterra energy New Caledonia

circular economy by giving them a chance to become new products again.

This strategic partnership combines Ravago's expertise in the mechanical preparation of plastic waste, Alterra's proprietary liquefaction technology, and Neste's expertise in the processing of hydrocarbons. Neste and Ravago are aiming for a first industrial chemical recycling site in North Sea Port in Vlissingen with an annual processing ...
