What is ASC 150 storage?

Warranty... 2. About ASC 150 Storage About controller operation The ASC 150 Storage provides effective control for an energy storage system (ESS). You can add the controller to an existing plant, or use it with other DEIF controllers in a power/energy management system.

How does the ASC 150 storage controller work?

Island operation with PV ASC Storage Grid-following... The ASC 150 Storage controller prioritises battery power over genset power. This means that the system uses as much battery power as possible before starting a genset. If the genset is in operation, the ASC 150 Storage controller tries to decrease the genset load to minimum (P DG minimum).

How does ASC 150 genset work?

This means that the system uses as much battery power as possible before starting a genset. If the genset is in operation, the ASC 150 Storage controller tries to decrease the genset load to minimum (P DG minimum). Power source operation: The ESS can be a power source if the SOC is above threshold 1.

The ASC 150 Storage provides effective, flexible, and scalable energy storage system (ESS) control with a wide range of options for greenfield and brownfield hybrid power applications. It can be used on its own for ESS/hybrid rental or integrated in third-party plant control solutions or a DEIF power management system.

The ASC 150 Storage controller controls and protects an energy storage system (ESS) with communication to a BMS, BCU, and/or a PCS. In an energy management system, the controller is designed for seamless integration of electrical storage with other power sources.

We have 1 Deif ASC 150 manual available for free PDF download: Operator's Manual ... About ASC 150 Storage. 6. About Controller Operation. 6. Typical Application Examples. 6. Without Power Management (Single Controller) 6. With Power Management. 6. Display, Buttons and Leds. 8. Controller Functions. 10.

The ASC 150 Storage is designed for rapid communication with your ESS: Using Modbus master communication via Ethernet, the controller can communicate with your BCU, BMS, PCS, and inverters much faster than over an RS485 connection. This helps your ESS respond quickly to changes in operating
