The scheme was launched by Prime Minister Narendra Modi on February 15, 2024. Under the scheme, households will be provided with a subsidy to install solar panels on their roofs. The subsidy will cover up to 40% of the cost of the solar panels. The scheme is expected to benefit 1 crore households across India.

A charge controller is an important component in any solar-powered system, as it regulates the flow of energy between the solar panels and the battery bank. The primary function of a charge controller is to prevent overcharging and undercharging of the batteries, ensuring that they are properly maintained and last for a long time.

Installing solar panels will save a significant chunk of money off your energy bill. According to the Energy Savings Trust a typical 4kWp solar system will save between ₹85 - ₹220 per year. As solar panels become more efficient and energy prices continue to rise, this figure should rise considerably over the coming years.

While the government will provide monetary subsidy of up to Rs 78,000 for installation of rooftop solar panels under the scheme, an applicant has to fund the remaining cost of purchase and installation. As many as 18 public and private banks in India have partnered with the government to offer loans for rooftop solar panels in India.

Solar panels are still economic even without subsidies. The installation delivers electricity from day one, with the result of a lower energy bill. Solar panels generally have a service life of 25 to 30 years (their efficiency drops to 80 or 90%). Today, you can assume an average payback period of 7 years for an installation.

Government grants, including ECO4 and the Home Upgrade Grant, can help you get free solar panels in the UK (except Northern Ireland) Once installed, solar panels can help reduce your electricity bills by as much ...
