Deal expands existing partnership beyond Nokia RAN and private wireless solutions 28 February 2024 Espoo, Finland - Citymesh has chosen Nokia's Core Software-as-a-Service (SaaS) as part of the Belgian operator's strategic aim of delivering greater service innovation to its customers, and realizing greater business agility and faster time ...

Our Sustainable Energy Management (SEM) digital toolset is a next-generation digitalization solution to simplify the means and improve the results when managing your DER portfolio. With SEM, you can: Understand the impact of ...

Nokia can help you address these challenges and succeed with your renewables strategy. Our 4.9G/LTE and 5G Industrial-grade Private Wireless solutions make your wind and solar farms safer for workers and optimize your operations.

Our ability to simplify complex scenarios based on a rich digital heritage places us at the forefront of developing digitalization solutions that can play a critical role in managing the power grid and driving sustainability in the energy industry. Our ...

Energy Solutions Group is the largest independent green power producer (IPP) in the Benelux area. ESG currently owns and exploits an operational portfolio of 666 MW representing a total investment of more than EUR ~1,2 bln. With this portfolio ESG is currently able to supply green power to 250,000 households and save 400,000 tons of CO2 annually.

In 2010, nCentric began providing wireless connectivity to the area, starting with wireless mesh technology at Noblewind and Belwind offshore wind farms. This was extended with 5G-ready systems in 2018 when nCentric entered a partnership with Nokia due to demand for reliable communication and the transfer of larger amounts of data.

Realize your smart grid vision. Optimize power distribution. Adapt to changing energy demands. Support new business models. Achieve your critical objectives with our solutions for power utilities. Increasing microgeneration, storage and energy conservation mean the power sector is facing lower demand and flatter revenues.

Energy industries are looking toward technology to solve some of their biggest challenges - from autonomous operations in remote locations, to smarter, more sustainable power transmission and distribution across nations, to bridging the digital divide and capturing new growth opportunities.
