

What is Benin's current energy situation?

This section provides information on Benin's current energy situation with energy demand-and-supply scenarios. According to the International Renewable Energy Agency (IRENA), 41% of Benin's population currently have access to electricity.

How can Benin increase local production?

However, the government of Benin is making serious efforts to increase local production through national projects, specifically the Solar Energy Promotion Project (PROVES) and the Renewable Energy Development Program (PRODERE). The principal RE sources in Benin are hydro energy, biomass energy, wind energy and solar energy.

How affordable is electricity in Benin?

In 2019, in terms of the affordability of electricity for consumers, Benin obtained a score of 81 out of 100 compared with the average value, which is 77.25 out of 100. The government of Benin plans to continue its efforts to make electricity accessible to the population and ensure energy self-sufficiency.

Which institutions are working to provide access to affordable energy in Benin?

Several institutional frameworks in the energy sector in Benin are working to provide access to affordable energy in the country. The ME is the biggest institution of the energy sector, responsible for the management of the energy sector and in charge of the implementation of RE projects.

Does Benin have a green energy potential?

Benin has also joined this dynamic by considerably increasing its green energy production efforts in recent years. The country has a huge undeveloped renewable-energy (RE) potential that can contribute considerably to its national energy production capacity. This paper summarizes the current RE situation in Benin and examines its future prospects.

What is the energy sector strategy in Benin?

In Benin, the energy sector strategy is aimed at improving the energy independence of the country and diversifying its sources of supply through the implementation of various interconnection projects with neighbouring countries and the enhancement of the national RE potential.

As a flexible power source, energy storage has many potential applications in renewable energy generation grid integration, power transmission and distribution, distributed generation, micro grid and ancillary services such as frequency regulation, etc. In this paper, the latest energy storage technology profile is analyzed and summarized, in terms of technology maturity, efficiency, ...

This indicates that solar PV is Benin's optimal technology for sustainable electricity generation. The study's findings are critical for policymakers developing Benin's renewable energy...

This paper summarizes the current RE situation in Benin and examines its future prospects. The current energy situation of the country is discussed, followed by an examination of its electricity demand-and-supply situation.

Renewable energy is the fastest-growing energy source globally. According to the Center for Climate and Energy Solutions, renewable energy production increased 100 percent in the United States from 2000 to 2018, and renewables currently account for 17 percent of U.S. net electricity generation. As renewables have grown, so has interest in energy storage ...

Benin has also joined this dynamic by considerably increasing its green energy production efforts in recent years. The country has a huge undeveloped renewable-energy (RE) potential that can contribute considerably to its national energy production capacity. This paper summarizes the current RE situation in Benin and examines its future prospects.

The EnergyPLAN energy model is used to analyze the energy, environmental, and economic impacts of various energy strategies in the Benin Republic. In addition, the study also proposed a mathematical model to estimate electricity generation from the conversion of municipal solid waste (MSW) into methane (CH₄) in Benin.

This paper summarizes the current RE situation in Benin and examines its future prospects. The current energy situation of the country is discussed, followed by an examination of its ...

Benin is one of the least-developed countries in West Africa, struggling to satisfy the energy needs of its 12.2 million inhabitants []. With a total surface area of 114 763 km², the country is endowed with a high potential for ...

BNEF: Energy storage market grew faster than ever in 2023. Image: Hyperstrong. According to the International Energy Agency (IEA) and BloombergNEF, battery storage was the most invested-in energy technology in 2023 with the biggest-ever annual growth in ...

EES technology refers to the process of converting energy from one form (mainly electrical energy) to a storable form and reserving it in various mediums; then the stored energy can be converted back into electrical energy when needed [4], [5]. EES can have multiple attractive value propositions (functions) to power network operation and load balancing, such ...

However, it is worth mentioning that a substantial portion of the global population still lacks reliable and affordable energy access, thereby relying on fossil fuel-based technologies for their daily energy requirements

[4, 5].The primary concern associated with fossil fuels is their detrimental greenhouse gas (GHG) emissions, which are major contributors to climate change ...

To make this true, three challenges must be met: reducing the dependence on imported energy; promoting the development of clean and RE sources through an energy transition based on low carbon and energy efficiency; and ensuring universal access to reliable, sustainable, modern and affordable energy services .

Table 2: Household water treatment practices in Benin Adapted from (INSAE, 2013) Practices Boiling Chlorine/bleach Filtration using a cloth Ceramic filtration, Sand filtration and others kind of filtration Solar disinfection Urban 0.3 3.6 0.5 0.2 0.1 Households (%) Rural Total (for the country) 0.3 0.3 4.4 4.0 0.3 0.4 0.1 0.1 0.2 0.1 Household ...

In this article, we summarize various sources and potential of renewable energy available in Benin. We then analyze the problems undermining the policy of developing renewable energy and propose the best mechanisms and actions for achieving these targets.

In this article, we summarize various sources and potential of renewable energy available in Benin. We then analyze the problems undermining the policy of developing renewable energy ...

GES can provide long-term energy storage making it useful for slower, longer-duration services such as peaking capacity, load following, and energy arbitrage. Emerging GES technologies typically use a low-cost and abundant medium such as sand, concrete, gravel, or rock. Other Energy Storage Technologies Hydrogen Energy Storage Systems

This study aims to forecast the energy demand for Benin while reducing greenhouse gas (GHG) emissions and propose alternative solutions to clean energy deployment barriers. The Low Emissions Analysis Platform (LEAP) is used to explore the future energy demand for Benin and associated GHG emissions.

Energy storage technologies can be broadly categorized into five main types: mechanical energy storage, electrical energy storage, electrochemical energy ... it is important to provide focused support for current hot and frontier technologies, encourage innovation in energy storage technologies, and strengthen cooperation and mutual benefits ...

This energy storage technology, characterized by its ability to store flowing electric current and generate a magnetic field for energy storage, represents a cutting-edge solution in the field of energy storage. The technology boasts several advantages, including high efficiency, fast response time, scalability, and environmental benignity.

To make this true, three challenges must be met: reducing the dependence on imported energy; promoting the development of clean and RE sources through an energy transition based on low carbon and energy ...

Expansion Of Energy Storage Solutions. Energy storage technologies will play an increasingly important role in ensuring the reliability of renewable energy systems in 2025. As more renewable energy sources like solar and wind are integrated into the electric grid, energy storage will be essential for managing fluctuations in power generation.

The nonaqueous Li-O₂ batteries possess high energy density value of ~3550 Wh/kg theoretically, which is quite higher in comparison to Li-ion batteries with density value of ~387 Wh/kg. Such high value of energy density of these batteries makes them suitable for renewable energy storage applications (Chen et al., 2013, Wu et al., 2017, Xiao et al., 2011, Yi ...

Water tanks in buildings are simple examples of thermal energy storage systems. On a much grander scale, Finnish energy company Vantaa is building what it says will be the world's largest thermal energy storage facility. This involves digging three caverns - collectively about the size of 440 Olympic swimming pools - 100 metres underground that will ...

Energy storage involves converting energy from forms that are difficult to store to more conveniently or economically storable forms. Some technologies provide short-term energy storage, while others can endure for much longer. Bulk ...
