Who is Drax Group plc?

Drax Group plc, trading as Drax, is a power generation business. The principal downstream enterprises are based in the UK and include Drax Power Limited, which runs the biomass fuelled Drax power station, near Selby in North Yorkshire. The Group also runs an international biomass supply chain business.

Where is Drax based?

The principal downstream enterprises are based in the UK and include Drax Power Limited, which runs the biomass fuelled Drax power station, near Selby in North Yorkshire. The Group also runs an international biomass supply chain business. The company is listed on the London Stock Exchange and is a constituent of the FTSE 250 Index.

How much electricity does Drax produce?

Its towering facility in the English countryside produces about 5% of the U.K.'s electricity. Drax has built pellet mills across the southeastern U.S. and in western Canada to feed that plant as well as other wood-burning plants around the world.

Did Drax buy Opus Energy?

In 2016, Drax Group acquired Opus Energy for £340 million funded by a new acquisition debt facility of up to £375 million. In October 2017, Drax sold Billington Bioenergy for £2 million to an AIM-listed energy company called Aggregated Micro Power Holdings.

Does Drax have a subsidiary in Houston?

But Drax has set up a subsidiary in Houston called Eliminito build several of them, and signed deals with two of the country's largest timberland managers to supply the wood. "The whole idea is that 24/7 renewable power is going to become increasingly in demand as data centers grow, as AI grows," Drax Chief Executive Will Gardiner said.

When did Drax Group acquire Haven Power & Billington Bioenergy?

In 2009, Drax Group acquired Haven Power - enabling it to sell electricity directly. In 2015, the Group acquired Billington Bioenergy, specialists in providing sustainable biomass pellets for domestic energy systems.

2 ???; "The whole idea is that 24/7 renewable power is going to become increasingly in demand as data centers grow, as AI grows. There's a huge need for that commodity," Drax Chief Executive Will Gardiner told The Wall Street Journal. Officials expect the wood-burning power plant to be up and running in the U.S. by 2030.

In addition to its plans to build a new power station, Drax is currently completing an £80 million

Benin drax power

upgrade to the existing plant. The project will see the generating capacity of two of the plant's four units increased by a combined 40 MWs to raise the facility's total generating capacity to 480 MWs.

Having converted Drax Power Station to use sustainable biomass instead of coal it has become the UK's biggest renewable power generator and the largest decarbonisation project in Europe. It is also where Drax is piloting the groundbreaking negative emissions technology BECCS within its CCUS (Carbon Capture Utilisation and Storage) Incubation ...

"Much of Britain's conventional power generators like coal and nuclear stations have retired in recent years," explained Dr Iain Staffell of Imperial College London, and lead author of the quarterly Drax Electric Insights report series. "Fewer dispatchable generators means less competition and higher prices, making cheaper electricity from the continent much more ...

"The Conservative Party's decision is reckless and irresponsible. It is deeply disappointing that they now care more about political point scoring than the country's ongoing energy security and ability to meet net zero. "In Government, the party acknowledged the key role Drax Power Station, the country's largest source of renewable power, plays in keeping the...

"The whole idea is that 24/7 renewable power is going to become increasingly in demand as data centers grow, as AI grows," Drax Chief Executive Will Gardiner said. "There's a huge need for ...

Bought by Drax in December 2018, the site is one of only four pumped storage hydro stations in the UK and has a capacity of 440 MW - enough to power more than 90,000 homes. Pumped storage is one of the oldest forms of large-scale energy storage requiring two reservoirs based at different altitudes but close to each other.

2 ???· Over the past 15 years, power giant Drax has transitioned from one of the world's largest coal-powered plants to the second-largest biomass producer as part of their green transition - footage courtesy of @DraxGroup. As it stands, Drax has exited from coal and has become the world's second-largest producer of BECCS after burning its last lump of coal in ...

Drax Group plc, trading as Drax, is a power generation business. The principal downstream enterprises are based in the UK and include Drax Power Limited, which runs the biomass fuelled Drax power station, near Selby in North Yorkshire. The Group also runs an international biomass supply chain business.

Millbrook Power is a Drax Group project to build and operate a rapid response gas-fired power station on land located on the Rookery South Pit, near the villages of Stewartby, Millbrook and Marston Moretaine in Bedfordshire.. The project received planning consent on 13 March 2019. Millbrook Power Station could run up to a maximum of 2,250 hours in any given year, provided ...

million EBITDA post 2027 from FlexGen(1) and Pellet Production UK energy system operator confirms large-scale biomass required for 2030 clean ...

Drax, originally the largest coal-fired power station in Western Europe, underwent a significant transformation over the past two decades to switch from coal to biomass. Today, instead of burning coal, we use around 7 to 8 million tons of wood pellets annually, primarily sourced from the southeastern U.S. and western Canada.

The 2.6-GW Drax Power Station in northeastern England--once Western Europe's largest coal-fired power plant--is poised to pioneer bioenergy with carbon capture and storage (BECCS), a negative emissions technology. ...

Since Drax Power Station first began generating power in 1974, it has become a cornerstone of the UK's energy infrastructure, now producing 9% of the nation's renewable electricity - the largest single source of renewable power in the country. The documentary shows how Drax has kept the country's lights on for half a century and ...

2 ???· "The whole idea is that 24/7 renewable power is going to become increasingly in demand as data centers grow, as AI grows. There's a huge need for that commodity," Drax Chief Executive Will Gardiner told The Wall Street ...

For 50 years Drax Power Station has been generating power and high quality jobs. Drax Power Station has kept Britain's lights on for 50 years. As well as playing a key role in the country's energy security and providing enough power for 4 million homes, we have also been a long-term source of high-quality well-paid jobs, too. Learn more.

The U.S. Government is supporting Benin's electric power sector through a \$391 million MCC compact that will close in June 2023. The compact has supported power sector policy reforms to ensure tariffs reflect costs, attract private capital into renewable power generation, and strengthen regulation and utility management.

Steve Marshall, Drax's Development Manager, said: "A new generation of pumped storage hydro plants will strengthen the UK's energy security by enabling more homegrown renewable electricity to come online to power homes and businesses across the country. Drax's plan to build a new plant at Cruachan will support hundreds of jobs and ...

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass allows active coal-fired power plants to convert to something more sustainable without entirely reconstructing their business model. Figures provided by Drax show that biomass generated 7% of all UK power in 2020. Data from the International Energy Agency show the fuel growing by 25% in the next five years.

By Bruce Heppenstall, Plant Director, Drax Power Station. Drax Power Station has kept Britain's lights on for 50 years. As well as playing a key role in the country's energy security, providing enough power for 4 million homes, we have been a long-term source of high-quality well-paid jobs, too.
