

BIOFerm is an experienced provider of turnkey renewable energy systems for biogas upgrading and anaerobic digestion. ... Our systems can meet stringent North American pipeline requirements, handle high-nitrogen gas, remove oxygen from the gas, have a high methane yield and no increased methane losses over time. ...

Rosendale Dairy, home to 8,500 cows, had a BIOFerm anaerobic digester system installed in 2013 to generate renewable energy from manure and tackle environment concerns. The system was built as a partnership between the University of Wisconsin-Oshkosh (UWO) and Rosendale Dairy. About 350 tons of manure per day are processed in the two ...

Founded in 2007, BIOFerm is headquartered in Madison, Wisconsin and provides turnkey bio gas upgrading and anaerobic digestion systems across the US and Canada. From project conception to commissioning and operation, we can handle every aspect of the process and are committed to providing successful renewable energy projects to our customers.

A: BIOFerm Energy Systems is a key provider of anaerobic digestion technology throughout the United States. With a rich portfolio of successful operations, a passion for waste recovery and a vision for the future of renewable energy in the U.S., BIOFerm Energy Systems will go far.

BIOFerm™ Energy Systems provides anaerobic digestion technology for energy generation and waste management to North American waste operations. Committed to sustainable and economical organic waste diversion, the BIOFerm™ technology utilizes anaerobic digestion to harness biogas rising from fermenting organics--food waste, manure, biosolids ...

Nadeem Afghan, CEO of BioFerm Energy Systems, is leading an effort to create environmentally friendly systems that convert organic waste into clean energy using the firm's anaerobic digesters. "It could be produced with cow waste, it could be produced with industrial waste," Afghan said, noting BioFerm's processes produce methane, which ...

Article Viessmann Group/BIOFerm Energy Systems Selected for Municipal Anaerobic Digestion Project with The City of Edmonton and The University of Alberta. ... Viessmann Group/BIOFerm TM was the first to deploy commercial-scale high solids anaerobic digestion technology in North America at the University of Wisconsin-Oshkosh in 2011. Today, ...

BIOFerm delivers turnkey energy solutions that use organic waste and manure as the primary input. BIOFerm biogas systems provide a valuable set of advantages for clients, including carbon neutral energy production, system reliability, waste volume reduction, system simplicity, fully automated management control systems, and energy expenditure ...

Upgrading landfill gas (LFG) offers several significant benefits - both environmental and financial. The primary component of landfill gas is methane (CH₄), which is a potent greenhouse gas with a much higher global warming potential than carbon dioxide (CO₂) over a shorter timeframe upgrading landfill gas and converting methane into biomethane, emissions of methane are ...

BIOFerm Energy Systems provides turnkey gas upgrading and anaerobic digestion facilities in North America, with our technology implemented at more than 450 digester installations and 900 PSA installations. Based in ...

BIOFerm Energy Systems is a leading provider of turnkey anaerobic digestion and gas upgrading facilities in North America, with over 450 digester installations. BIOFerm is committed to a sustainable energetic and economic transition, waste management, and clean energy creation by harnessing biogas from anaerobic
