What is Solar PV and how does it work? Typical solar panel systems contain around ten Panels and generate DC electricity. An inverter is installed to convert DC electricity to AC. This electricity can be used throughout your home, excess exported to the grid or stored in a storage battery to use at a later stage.

Appointment. Before you book an appointment with a sales representative, it's important to make sure you know exactly what questions to ask. Wickes Solar works with Solar Fast's well-trained reps who know everything there is to know about the solar installation process and can give you information on costs, savings, and what will be best for you and your home.

Here are 5 ways for you to get the most out of your solar panels: Keep your solar panels out of the shade. Even though solar panels are clever enough to create energy without being in direct sunlight, more sunlight means more electricity. Be mindful of trees that grow or any objects that could block your solar panels light source.

Once everything is up and running, with Wickes Solar powered by Solar Fast, you can monitor your energy usage, storage, and how much is going to the grid via an app. Your panels can last up to 50 years or more and, when you install with us, we'll even replace any additional batteries and inverters, keeping your system running at all times.
