North Macedonia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Renalfa IPP is building a solar power plant in the REK Oslomej coal complex in North Macedonia under a public-private partnership. It obtained financing from the Green for Growth Fund. The days of coal-fired power plants in the Balkans are numbered, according to all the outages, abrupt closures, market volatility and environmental requirements.
