

Cuba elaine solar

Could more solar power boost Cuba's electric grid?

By ALEXA ST. JOHN, INGRID LOBET and ANDREA RODRIGUEZ HAVANA (AP) -- Cuba's large-scale blackouts that left 10 million people without power this month may not have happened if the government had built out more solar power to boost its failing electric grid as promised, some experts say.

Can solar power solve Cuba's energy problems?

In a nation with plentiful sunshine, Cuban officials have long had the opportunity to encourage solar power as one solution to national energy problems. But October's sweeping outages -- the island's worst power failure in years -- show little progress has been made.

Is Cuba a good candidate for solar?

Besides the strong sunlight, there is another way that Cuba is a good candidate for solar. A significant share of its electricity comes from smaller power plants distributed around the country. Solar could be added or switched out in those locations. But it hasn't happened yet.

Should Cubans buy solar panels paired with batteries?

The minister of energy and head of the nation's electric utility encouraged Cubans to buy rooftop solar systems paired with batteries, instead of the gas and diesel generators purchased by Cubans who can afford them.

Will Cuba's energy investment strengthen the national energy system?

This investment is expected to significantly strengthen the national energy system. Since October, Cuba has experienced total paralysis of the national energy system three times, caused by a malfunction at the main Antonio Guiteras power plant in Matanzas in the western part of the country.

Where does Cuba's energy come from?

Nearly all of the country's power -- 95% -- comes from burning fossil fuels. Much of that is from burning crude oil, a particularly polluting form of generation. One of Cuba's biggest trading partners, China, makes 80% of the world's solar panels, according to the energy data and analytics firm Wood Mackenzie, and they are inexpensive.

In a recent televised address, Alfredo Lpez, the general director of the state-owned Electric Company (UNE), urged citizens to invest in solar panels, admitting that while improvements could occur, the government cannot promise a stable energy solution in the short or medium term.

Instalaci#243;n de parques solares fotovoltaicos en Cuba: Proyecto basado en ciencia e innovaci#243;n.
