optimized procedure published as NREL/TP-510-42618.7,8 This procedure enables the determination of cellulose and hemicellulose based on their monomeric compounds. Lignin can be calculated as acid-soluble lignin (ASL) and as acid-insoluble lignin (AIL). Due to the different chemical structures and polarities, the biomass-derived

The total composition analysis of biomass was also conducted using the standard NREL method (NREL/TP-510-42618) for comparison. The total composition analysis of the biomass indicates the dominance of cellulose (Fig. 3 c) and confirms the earlier observations that cellulose dominates hemicelluloses by nearly twofold, and that the lignin content ...
