How do I register a portable battery in Denmark?

There are also certain requirements for marking with heavy metal contents and capacity. You must register in the national register with DPA before you can legally sell batteries. Imports of portable batteries must also be registered with SKAT- the Danish Tax and Customs Administration.

Who is responsible for battery production in Denmark?

In Denmark the rules on producer responsibility are administered by DPA. Producer or importers? If you produce or have a battery product produced in your own name/brand, you are subject to producer responsibility, including duties to register, take back, and report on batteries sold in Denmark.

How to import portable batteries in Denmark?

Imports of portable batteries must also be registered with SKAT- the Danish Tax and Customs Administration. You must inform end-users about the correct management of the batteries, also at the end of their service life, including the conduct of public information campaigns about collection, treatment, and recycling of end-of-life batteries.

Do you have a responsibility for reselling batteries in Denmark?

Environmental legislation on batteries and accumulators sets out producer responsibility; this means that if you produce or import batteries in view of reselling them in Denmark, you must contribute to the organisation and financing of take-back and management of those batteries when they reach the end of their service life.

Environmental legislation on batteries and accumulators sets out producer responsibility; this means that if you produce or import batteries in view of reselling them in Denmark, you must contribute to the organisation and financing of take-back and management of those batteries when they reach the end of their service life.

Mobile and off-grid power for the Automotive, Industrial, Maritime, Military and Renewable energy industries. True Sine Wave Inverters: From 12 volt or 24 volt batteries the energy is converted to 230 VAC. With a coefficient of utilisation approaching 95%, maximum utilisation is ensured from connected batteries.

A new EU project, BIG-MAP (Battery Interface Genome - Materials Acceleration Platform), aims at accelerating the speed of battery development by changing the way we invent batteries, so that future sustainable and ultra-high-performance batteries can ...
