Which rigs have energy storage systems for onshore drilling?

The energy storage system developed for onshore drilling is among the world's first ones. As a foreign analog, only the project of the German rig manufacturer Bentec implemented in Oman can be highlighted. In 2017, the container-type 0.9 MW Bentec ESS with a storage capacity of 0.3 MW was put into trial operation on the KCA Deuteg T-94 rig.

How a drilling rig is used to charge a battery bank?

It is noted that the recovery power of the drilling rig, which is produced from the movement of the drilling string and the tractions, and the production energy of the wind turbine with power P_4 shown in Fig. 2 is used to charge the battery bank, and there is an exchange of energy between the drilling rig and the battery bank [20,21].

How a drilling rig is powered by a diesel generator?

According to the conditions of drilling string movement, P_1 power from the diesel generator was used to feed the drilling rig and P_2 power was used to charge the battery bank. The power of P_3 stored in the battery and hybrid energy will be fully able to supply the energy required by the drilling rig during low consumption hours.
