Is solar energy the future of Japan's Energy Strategy?

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality by 2050 with an interim goal of 36-38% of energy from renewables by 2030.

How has Japan benefited from a new solar energy facility?

The Japanese government has introduced several specialised programs to facilitate this growth. One of the key existing programs is the feed-in tariff, which guarantees the purchase of electricity from a new solar energy facility at a set price for a number of years.

How much solar energy does Japan produce in 2022?

In 2022, Japan produced 4,956 TWh of energy. Assuming energy consumption remains relatively stable, renewable energy capacity will need to grow to 1,784 TWh by 2030. This growth relies on better government policy to incentivise renewable energy and grid infrastructure investment. Why Is Solar Power So Popular in Japan?

Who makes solar power in Japan?

In line with the significant rise in installations and capacity, solar power accounted for 9.9% of Japan's national electricity generation in 2022, up from 0.3% in 2010. Japanese manufacturers and exporters of photovoltaics include Kyocera, Mitsubishi Electric, Mitsubishi Heavy Industries, Sanyo, Sharp Solar, Solar Frontier, and Toshiba.

How much solar energy does Japan use?

Furthermore, the country's population is in decline, which will free up an additional 8,000 square km of agricultural land - an ideal amount for utility-scale solar facilities. How Much of Japan's Energy Comes From Solar? In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation.

Why is solar power growing in Japan?

The steady growth of solar power in Japan is attributed to several factors, including the country's focus on energy security, economic efficiency and environmental sustainability. Post-Fukushima, there was a national reevaluation of energy sources.

Let's not jerk around (on solar panels, wind, and batteries). We need to urgently invest in and scale up early-stage energy technologies if we are going to halve global emissions by 2030. This will require a massive effort to fund [Read more...](#)
