What items can be installed in an electricity meter box/cupboard?

Items permitted to be installed within electricity meter boxes/cupboards include: the local isolating device (e.g. main cut-out fuse), the electricity meter and communications hub, and may include a single- or double pole-isolation device (installed between the electricity meter and consumer unit)."

Can electrical equipment be used in a meter cabinet?

Electrical equipment associated with the consumer's electrical installation is increasingly being found within the meter cabinet of domestic and similar premises. The space within such cabinets is limited and typically allocated for specific usages by the distributor and energy supplier and therefore, should not be used to house other equipment.

Can a consumer unit be installed in a meter cabinet?

"While the meter cabinet is the customer's, it is a space designed for the use of electricity industry apparatus only and no allowance is made for additional equipment. For safety reasons, we would not recommend that any internal wiring, including a consumer unit, is installed within the cabinet."

Should meter boxes/cupboards contain electrical equipment?

"External meter boxes/cupboards should only contain equipment required to enable an electricity (or gas) supply to be provided to the premises safely, as defined by relevant regulations.

Which metering equipment should be installed in the meter enclosure?

Only intake and metering equipment should be installed in the meter enclosure, as there is no allowance of space for housing additional equipment not associated with those functions.

What should be considered when metering a gas meter?

Beyond this, the distance and obstacles between the gas and electricity meters should be minimised to the extent permitted. 2.8 Certain electricity metering arrangements will include 'meter tails', which interconnect, between the meter, to the local isolating device (e.g.: cut-out fuse) and consumer switchgear.
