Summary. The integration of Energy Storage (ES) Systems, like batteries and supercapacitors, in power systems is accelerating globally due to their ability to enhance the flexibility and efficiency required to integrate intermittent renewable energy sources (RES).

The standard way a Distribution System Operator (DSO) responds to these issues is grid strengthening, i.e. the installation of thicker cables and the resizing of transformers [6].However, other technologies can improve the grid system"s reliability, such as ESS [7].These technologies can store energy at a specific time and give it back to the system when required.

Regarding electricity storage, Lund et al. (2016) shows that the price per MWh is higher for Battery Energy Storage Systems (BESS) than for Pumped Hydro Storage (PHS) and Compressed-Air Energy Storage (CAES). However, the price of batteries is decreasing fast, and batteries are much more flexible in terms of capacity and therefore more adequate for a small ...
