

What are the benefits of solar energy in Eritrea?

The government of Eritrea has been making efforts to promote the use of alternative sources of energy, especially solar energy, to mitigate the problems associated with the use of fossil fuel. A major benefit of solar energy is that it does not pollute the environment and saves money in the long run even if its installation cost is quite high.

Does Eritrea have solar power?

Eritrea's weather, characterized by long sunny days throughout the year, makes it suitable for harnessing solar power. Data from the wind and solar monitoring stations installed in many parts of Eritrea show that the country has a great potential, around 6 kWh/m<sup>2</sup> of solar energy.

Where is Eritrea's first solar plant?

The government of Eritrea has received a \$49.92 million grant from the African Development Bank to fund a 30 MW photovoltaic plant in the town of Dekemhare, 40 km southeast of the capital Asmara. It will be the country's first large-scale solar plant.

Why should Eritrea invest in a solar plant?

This initiative aims to address the energy needs of Eritrea while promoting sustainability and reducing carbon emissions. The solar plant is anticipated to contribute to the nation's energy independence and support its commitment to renewable energy development.

Does Eritrea have a solar farm?

Eritrea is lagging far behind in the electrification of its territory and is now turning to renewable energy. The government has launched the country's first solar farm, a 30-MW facility 30 km from the capital, Asmara.

What is Eritrea's main source of energy?

Eritrea's major source of energy is petroleum, which drains the foreign currency reserves of the country and is globally a major cause of pollution. The government of Eritrea has been making efforts to promote the use of alternative sources of energy, especially solar energy, to mitigate the problems associated with the use of fossil fuel.

## Eritrea synergie solaire

Europe, Latin America and Africa, is pleased to announce the completion and commissioning of two solar-hybrid mini grids, bringing power to the rural communities of Areza and Maidma in Eritrea in east Africa.

Eritrea has one of the lowest electrification rates in the world, and its lack of electrical resources continues to have a negative impact on the country's economic development. To the east of the capital Asmara lies a photovoltaic plant built by China. Construction of this new plant began last November and ended in April of this year.

Areza and Maidma are rural communities in Eritrea that will benefit from this cleaner, more affordable reliable source of power. They currently depend entirely on diesel-generated power, available in the evening only, ...

Depuis 5 ans, le fonds de dotation Synergie Solaire mobilise, en France, des entreprises spécialisées dans les énergies renouvelables, en particulier dans le photovoltaïque, qui apportent un soutien matériel et/ou financier ou détachent du personnel pour la réalisation de projets humanitaires d'électrification afin d'améliorer les conditions de vie et la croissance ...

Areza and Maidma are rural communities in Eritrea that will benefit from this cleaner, more affordable reliable source of power. They currently depend entirely on diesel-generated power, available in the evening only, because they are set in one of the most remote areas in Eritrea without connection to the nation's electrical grid."
