What is ETAP microgrid energy management system?

ETAP Microgrid Energy Management System is an-all-inclusive holistic software and hardware platform that provides complete system automation for safe and reliable operation. The solution integrates with onsite Cogeneration, Solar PV, Energy Storage, Absorption Chillers, and more to manage load demand and cost-effective generation in real-time.

What is ETAP microgrid testing?

Once the controller logic is deployed to the ETAP Microgrid controller hardware software-in-the-loop (SIL) or hardware-in-the-loop (HIL), testing can be utilized where the physical controller interacts with the model of the microgrid and associated devices.

How many off-grid microgrids are there?

The grid is divided into four off-grid microgrids. The focus of this presentation is about three of the microgrids that are very similar in size and operation. Each of these microgrids includes two PV generation (total 6 MW), two battery storages (total 5MW, ~18 MWh), and two emergency backup diesel generators (~ total 3.8 MW).

Why is a microgrid better than a single DG?

Compared to a single DG, the microgrid can provide more significant technical advantages, control flexibilities, economical operation, and better means of improving energy efficiency. Dispatchable resources, especially energy storage systems, are vital assets to enable microgrid operation in islanded mode.

Are microgrids efficient?

Microgrids are almost 85% efficient as they have very little transmission losses and use the surplus heat to warm or cool buildings. During power outage or disturbance, Microgrids can island themselves and retain power availability, avoiding blackouts and lost productivity.
