

Google sunroof project Isle of Man

What is Project Sunroof?

Project Sunroof puts Google's expansive data in mapping and computing resources to use for people and organizations interested in solar power, helping illustrate the potential of solar power for a single house, and with the introduction of the data explorer, the potential of solar for zip codes, cities, counties and states.

Does Project Sunroof provide information about solar installers?

Yes, Project Sunroof can help you estimate the solar savings potential of your home. It provides information on the potential savings you can achieve by installing solar panels on your rooftop.

What is sunroof & how does it work?

Initially launched to drive consumer awareness and education, the service now also makes it easy for interested homeowners to connect with solar providers in their area. Sunroof covers 43 million rooftops in the U.S. -- which is more than 50% of all households -- and in the coming months will be available in all 50 states.

How much data does sunroof process?

Sunroof processes roughly 1 petabyte (1,000 terabytes) of data: height and color for 43 million homes; weather information; about 1,000 state and local incentives; and hundreds of local electricity rates. Over the past 3 years, Sunroof has grown from a part-time project to a full-time job for Elkin and his team.

Today Google updated its Project Sunroof with some pretty striking data on approximately 60 million buildings and the viability for Solar Panels to power them. According to the search giant ...

Which solar panels should you use? When selecting solar panels, review the following details with your solar provider: Best value for your targeted savings: Depends on how much usable roof space you have, panel power production, and cost. Aesthetics: Panel color and mounting systems can be beautifully designed to integrate well with your home architecture.

Project Sunroof is an innovative initiative by Google that aims to accelerate the adoption of rooftop solar energy.
