

# Greenland solar combo deals

Where can I see a solar eclipse in Greenland?

This unique solar eclipse, far away from any inhabited location, is a fitting start to our grand expedition cruise from East to West Greenland. Departing the hip Icelandic capital of Reykjavik, we will sail directly for the eclipse area to witness this natural wonder, surrounded by staggering natural beauty.

Will Greenland see a solar eclipse from the fjord?

Air flowing down from the Greenland Ice Cap into the sound dries and warms, forming an unusually sunny microclimate. Satellite observations from August 12 in past years show a better than 70 percent chance of seeing the eclipse from the fjord - among the best prospects along the whole of the eclipse track, in a spectacular Greenland landscape.

When does Greenland come to life?

While Greenland experiences the midnight sun from May to August, during June, many of the fjords are still frozen, and snow reaches down to the sea. This cold and unpredictable weather can hamper exploration at times. By July, Greenland begins to come to life.

Is Greenland Cold?

North Greenland is correspondingly colder than the southern parts of the country. In the Upernavik and Thule areas, long calm sunny days are the norm in summer, but expect cooler temperatures in around 6-10°C (43-50°F). While generally settled, cool misty and foggy days, frosts and light snow can occur any time.

What happens in Greenland in the summer?

Flowers bloom in the brief Arctic summer, rotating through the day to follow the precious sunlight. In wilderness areas, muskox and reindeer can be seen grazing on the fresh greenery, while inhabited locations burst to life. Locals in Greenland take advantage of the brief summer to harvest the ocean's riches, and summer is prime fishing season.

Does Greenland have snow?

While generally settled, cool misty and foggy days, frosts and light snow can occur any time. East Greenland differs significantly from the rest of the country; here, a current of cold water flows down from the Arctic Ocean, moderating the temperature.

Conditions permitting, experience nearly two minutes standing in the Moon's shadow during the August 12, 2026 total solar eclipse, with increased chances for clear skies in the unusually sunny microclimate created around Greenland's Scoresbysund, the largest and ...
