

How many deep sea gold lockers can be placed

How much gold is on the seafloor?

One study suggested that there is enough gold on the seafloor for every person on the planet to have 9lb of the stuff, equivalent to \$170,000 apiece. Another study suggested that actually getting hold of that gold would cost more than double that, so don't hold your breath.

Do countries need a deep-sea mining code?

Countries at the UN's ISA need to adopt a deep-sea mining code before any commercial mining in international waters can begin. The original Nautilus mining ship which was reclaimed by its Chinese owners when the company failed to pay its debt.

Should deep sea mining be regulated?

In 2022, more than 30 deep sea experts, including four from an ISA committee, concluded there wasn't enough data to regulate mining in the deep. Hundreds of scientists, as well as countries such as Germany, Canada, Spain, Chile and New Zealand, have called for a moratorium until further research is done (France wants an outright ban).

Should the seafloor be protected from mining?

Given the lack of knowledge about the seafloor, nations should agree to set aside large areas that are off limits to mining, says Conn. While the world's growing list of marine protected areas is a good start, they currently cover only a small percentage of the total ocean.

What should you know about seafloor mining?

As the future of seafloor mining is debated, here are five key points you need to know about the risks and rewards of extracting precious metals and minerals from the ocean. The bottom of the world's ocean contains vast supplies of resources like gold, diamonds, and cobalt.

How deep is gold found in the ocean?

Gold and other valuable minerals can be found between a few hundred feet and about 20,000 feet (6,100 meters) down on the seafloor. There is enough gold to give every person alive nine pounds, which would be worth about \$150 trillion.

Now, though, the first deep-sea mines are closer than ever to opening. In 2018, a test of deep-sea mining methods was carried out in the waters off Japan. In 2019, the world's first commercial deep-sea mine is due to open off Papua New Guinea.
