

How to dismantle the Fengli Power Generation fan

How do you disassemble a ceiling fan?

After removing the canopy cover, the next step in disassembling your ceiling fan is to disassemble the motor housing. Follow these steps to safely take apart the motor housing: Inspect the motor housing to identify any screws or fasteners that hold it together. These screws are typically located around the perimeter of the housing.

How do you replace a fan?

Typically, it's a simple 2-pin or 3-pin (less common) power connector (soldered wires are pretty rare these days) and all you have to do is disconnect it (it'll have small tabs holding it in so a little force is required) and replace the fan. If your setup is different or if you need more... It is fairly easy to do.

How do you reassemble a fan motor?

Follow these steps to ensure a proper and successful reassembly: Begin by reattaching the fan motor components, including the motor housing, rotor, stator, and bearings. Make sure they are aligned correctly and secure them with the screws or fasteners you previously removed.

How do I remove a fan motor?

Follow these steps to safely remove the motor: Inspect the motor housing to locate the screws or bolts that secure the fan motor to the housing. Using a screwdriver or wrench, loosen and remove the screws or bolts that hold the fan motor in place.

How do you reattach a ceiling fan motor?

Begin by reattaching the fan motor components, including the motor housing, rotor, stator, and bearings. Make sure they are aligned correctly and secure them with the screws or fasteners you previously removed. Next, connect the fan motor wires to the corresponding wires in the ceiling electrical supply.

How do you stop a fan from turning on?

Switch off the circuit breaker by flipping it to the "off" position. This will cut off the power supply to the fan. Double-check that the fan is no longer receiving power by turning on the fan switch or pulling the fan chain. If the fan does not turn on, you can proceed with confidence knowing that the power is off.

Take the fan out. On the backside of the motherboard assembly, you will see a large fan. Disconnect the cable, and then remove the three screws holding it in. Pull the fan out so that you can clean all of the dust off of it. This is all the disassembly you need to do in order to clean out the inside.

* the fan cover is held by 3 tabs at the 9, 3, and 12 o'clock positions. It is easiest to pry from the tabs at 9 and 3 o'clock positions. ifabri - Jan 26, 2016 Reply. Thank you!! I am not at all DIY minded. I ordered a part
