As the solar photovoltaic market booms, so will the volume of photovoltaic (PV) systems entering the waste stream. The same is forecast for lithium-ion batteries from electric vehicles, which at the end of their automotive life can be given a second life by serving as stationary energy storage units for renewable energy sources, including solar PV. The main ...

A guideline can be provided with certain examples to have an idea about the cost. For instance, in the USA, for an average-sized installation of a PV system, the cost may range from 11,144 to 14,696 US\$ after solar tax credits, and the mean price of PV panels is from 2.51 to 3.31 US\$ per watt (ENERGYSAGE, 2020).

Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. Total W Peak of PV panel capacity = $3000 / 3.2$ (PFG) = 931 W Peak. Now, the required number of PV panels are = $931 / 160W = 5.8$. This way, we need 6 numbers of solar panels each rated for 160W.
