The future of harvesting solar energy. Solar energy harvesting technology is increasingly utilized as an alternative to electricity generated by fossil fuel. While various methods of solar energy harvesting exist, they all fundamentally use the sun to perform work in a specifically desired way, something we traditionally rely on electricity to do.

Solar cells are the electrical devices that directly convert solar energy (sunlight) into electric energy. This conversion is based on the principle of photovoltaic effect in which DC voltage is generated due to flow of electric current between two layers of semiconducting materials (having opposite conductivities) upon exposure to the sunlight [].

Photovoltaic (PV) solar energy is considered to be a fundamental piece of the energy system transformation for several reasons: PV systems do not emit GHG when producing electricity. The only GHGs associated with this technology are those emitted during the production of PV modules and other system components, and they can be almost fully avoided if emissions-free energy ...

Over the past decade, global installed capacity of solar photovoltaic (PV) has dramatically increased as part of a shift from fossil fuels towards reliable, clean, efficient and sustainable fuels (Kousksou et al., 2014, Santoyo-Castelazo and Azapagic, 2014). PV technology integrated with energy storage is necessary to store excess PV power generated for later use ...

Since wind and solar energy are highly dependent on weather conditions, the amount of power available from these sources is unpredictable and fluctuating. As a result, a storage system is necessary for sustainable use. Solar energy can be stored in electrical, chemical, electrochemical, or thermal forms (see Fig. 1.9). Among today's energy ...

Water tanks in buildings are simple examples of thermal energy storage systems. On a much grander scale, Finnish energy company Vantaa is building what it says will be the world's largest thermal energy storage facility. This involves digging three caverns - collectively about the size of 440 Olympic swimming pools - 100 metres underground that will ...
