

Sinds onze investering in 2022 heeft HyET Solar hard aan de weg getimmerd. Het bedrijf is zowel organisatorisch als op financieel gebied flink versterkt. Per 1 februari is Roland Pechtold als CEO toegetreden tot het bestuur van HyET Solar. Roland zal zich vooral richten op de transitie van productontwikkeling naar productie op schaal en de ...

Arnhem-based HyET Solar is the manufacturer of Powerfoil, a lightweight, fully flexible, thin-film solar PV module that is especially suitable for low-load and curved surfaces, including the roofs of distribution centres, ...

HyET Solar specializes in the development of flexible, lightweight solar modules within the renewable energy sector. Their main offerings include silicon-based solar panels designed for easy integration into buildings and other structures, providing a cost-effective and efficient solution for solar energy generation.

HyET Solar has the ambition to manufacture at large scale very low-cost PV products offering innovative application possibilities. HyET Solar products are light weight, flexible and based on Thin Film Silicon and Perovskite technologies. With the investments of Teslin Participaties and FFI, two powerful and complementary strategic partners ...

2 May 2022. FFI and Teslin Participaties provide growth capital to Netherlands-based HyET Solar. The global green energy company FFI and the Dutch investment fund Teslin Participaties have provided growth capital to the Dutch company HyET Solar, a leader in flexible and lightweight solar PV technology which has the potential to accelerate the global energy transition.

HyET Solar Netherlands BV has received an order from Royal Vopak to apply thin-film PV modules (Powerfoil) on one and potentially two of their large diesel storage tanks in Rotterdam, subject to regulatory and permit approval. Powerfoil is the only suitable Solar PV candidate for this application because of its unique product characteristics ...

HyET Solar's modules can be installed on a curved, irregular surface, lightweight, fragile structure and on roofing material like Steel, Aluminum, Bitumen, Poly Carbonate. What is the lifespan of HyET's solar modules? The lifespan of modules generally ranges between 10 to 20 years. Are flexible solar modules as efficient as traditional solar ...

Traditional solar panels tend to have a longer lifespan (25-30 years) and higher energy efficiency (15-22%), which means they generate more power over time compared to flexible modules (typically 10-15% efficiency and a 10-20 year lifespan). This can make traditional panels more cost-effective over the long term, depending on the installation ...

Hyet solar French Southern Territories

We at HyET Solar are dedicated to driving the transition to a sustainable energy future with our innovative, flexible, and circular solar modules. We aim to lead the way in making green energy both affordable and seamlessly integrated into everyday ...

Andrew Forrest's Fortescue Future Industries has bought a majority stake in technology group HyET. Its "Powerfoil" solar technology is described as extremely lightweight (5% of the weight of ...

About the HyET group; HyET Solar; HyET Hydrogen; HyET E-Trol; HyET NoCarbon; HyET Lithium; Contact us; From fossil to pure abundant energy. HyET develops technologies that: Make electric cars drive further. HyET develops ...

Arnhem-based HyET Solar is the manufacturer of Powerfoil, a lightweight, fully flexible, thin-film solar PV module that is especially suitable for low-load and curved surfaces, including the roofs of distribution centres, football stadiums and gas stations.

We at HyET Solar are dedicated to driving the transition to a sustainable energy future with our innovative, flexible, and circular solar modules. We aim to lead the way in making green energy both affordable and seamlessly integrated into everyday life, supporting the EU's carbon-neutral ambitions. By focusing on sustainability, innovation, quality, collaboration, and integrity, [...]

HyET Solar is developing a product that will add a large value to the world of energy transition. The entire roll-to-roll production process of our lightweight flexible solar foil is unique in this world and our teams work constantly on optimization and improvements. We currently have 20 machines on site, in different stages of progress.

Dutch thin film manufacturer HyET Solar has received backing from Australian green hydrogen producer Fortescue Future Industries (FFI) and Dutch investment fund Teslin Participaties that will...

HYET Solar, a relatively new company founded by Rombout Swanborn, recently bought all assets of Helianthos from Nuon. The company plans to further develop Helianthos" technology with a team of ...

HyET Solar has developed Powerfoil, a thin, lightweight and flexible solar module. Our modules are can be attached to almost any surface, are only 0.5mm thick and weigh less then 0.6kg/m#178;. Our roll to roll manufacturing process allows for large scale production at extremely low cost.

About the HyET group; HyET Solar; HyET Hydrogen; HyET E-Trol; HyET NoCarbon; HyET Lithium; Contact us; From fossil to pure abundant energy. HyET develops technologies that: Make electric cars drive

further. HyET develops technologies that: ...

HyET Solar develops and produces low cost and efficient solar PV modules (Powerfoil) that are lightweight and flexible. It aims to drastically reduce the cost of solar power and is targeting a cost structure for modules of \$100k/MW. The application possibilities cover a wide span, ranging from low cost utility scale power plants to integrated ...
