What was the energy grid like in Uruguay?

Uruguay's energy grid was powered almost exclusively by domestically created, renewable energy, and, adjusted for inflation, consumer prices had gone down. Today, there are more than 700 wind turbines installed across Uruguay's countryside. "It was absolutely a complete transformation," says Méndez Galain.

What is Uruguay's energy future?

His vision for Uruguay's energy future was to cover that empty land with hundreds of wind turbines. Today, wind power accounts for around 40% of Uruguay's energy production. And, according to a 2008 law, all the wind in the country officially belongs to the Uruguayan people.

Does Uruguay have a wind power auction?

In 2009, Uruguay started holding auctions in which different wind companies from around the world came to bid on how cheaply they'd sell renewable energy to the country. In 2011, Uruguay held an auction intended to secure 150 megawatts of new wind power, which would have represented about 5% of the country's energy generating capacity.

What is the main source of energy in Uruguay?

Fossil fuels are primarily imported into Uruguay for transportation, industrial uses and applications like domestic cooking. Four hydroelectric dams provide much of the country's energy supply. Historically, energy has been a stronghold of state-owned companies, such as UTE and ANCAP.

Is Uruguay a repeatable framework of energy sovereignty for developing countries?

Ramón Méndez Galain believes so. Uruguay's former national director of energy in the Ministry of Industry, Energy and Mining, who was the impetus for the country's shift away from dirty fuels, has been promoting the country's success as a repeatable framework of energy sovereignty for developing countries.

Does Uruguay have fossil fuels?

A relatively small nation spanning 175,000 square kilometres (76,568 square miles) with a population of 3.4 million - 96% of whom live in urban centres - Uruguay has no significant fossil fuel reserves. Fortunately, its geography makes it ideal for utilizing powerful rivers and uninterrupted grasslands for wind energy.

ICO Energy and Engineering provides a complete suite of Commissioning Services to reduce construction and future year operational cost, increase reliability and efficiency, enhance system and equipment performance, ensure maintainability, and deliver required compliance with comfort and process criteria.
