

# Intelligent energy system Dominican Republic

What is the current condition of the Dominican energy sector?

The PEN presents the current condition of the Dominican energy sector while outlining its future development. The DR's installed generation capacity connected to the National Interconnected Electric System (Sistema Eléctrico Nacional Interconectado - SENI) is around 5,631.47 MW and the average peak demand is around 3,312 MW.

What is the first solar-plus-storage project in the Dominican Republic?

Construction has started on the first major solar-plus-storage project in the Dominican Republic, which features a 24.8MW/99MWh battery energy storage system (BESS). The Comisión Nacional De Energía (CNE) of the Dominican Republic announced the start of work on the Dominicana Azul solar project shortly in late December (22 December).

Is the electric power sector affecting the Dominican economy?

Despite the present administration's efforts to increase the installed capacity of electricity generation from renewable sources, the electric power sector continues to be one of the most significant problems affecting the Dominican economy.

Interconnected Modern Multi-Energy Networks and Intelligent Transportation Systems A timely introduction to the revolutionary technologies reshaping the global energy market The search for more ...

Dominican Republic's Energy Minister Joel Santos (in the picture) sees a large share of solar energy in driving the country's energy transition and diversification. ... At present, renewables account for 18% of the national energy system with solar energy's share being 8%. The latter is likely to grow to 17% of the total by 2025.

Herrera revealed that an Intelligent City will be established this year in the Bávaro-Punta Cana area (east) where they'll offer 24 hours of power with smart networks and meters to over 33,000 residential customers and 72 hotels.

The Green Roof project aims to install solar panels on the roofs of public buildings managed by an intelligent energy efficiency system that will generate renewable energy and reduce dependence on fossil fuels.

Construction has started on the first major solar-plus-storage project in the Dominican Republic, which features a 24.8MW/99MWh battery energy storage system (BESS). The Comisión Nacional De Energía (CNE) of the Dominican Republic announced the start of work on the Dominicana Azul solar project shortly in late December (22 December).

Like; Comment; May 13, 2024 May 13, 2024 2:10 am GMT; 55 views ...

During peak times between 9:00 AM and 1:00 PM, renewable sources contribute over 35% to the system, approximately 890 MW. The increase in clean energy reduces spot market prices and decreases fossil fuel consumption and imports, leading to less pollution and reduced foreign energy dependence.

At the end of 2022, the Dominican Republic reached the 21% of installed renewable energy capacity in the Central America and Caribbean region. This 2,6% growth in just one year is due to the addition of new solar and wind farms.

The Dominican Republic's ambitious efforts to expand its renewable energy capacity underscore its commitment to a sustainable and resilient energy future. By fostering international collaboration through platforms like the International Solar Alliance and implementing a robust legal framework encouraging investment, the country is setting a ...

Who We Are Our Company CEPM is a private company belonging to the Dominican Republic's electricity sector. It generates, transmits, distributes and markets energy in the tourist region of Punta Cana-B#225;varo and Bayah#237;be, with an available installed capacity of 315 MW. We supply energy solutions and reliable complementary services, promoting sustainable development in ...
