What is a solar Diya?

A solar Diya is a small lantern made of plastic with a solar panel on top. The solar panel converts sunlight into electricity and stores it in a battery, which is also inside. The small circuit inside converts the power into light through an LED. The solar panel also functions as a light sensor.

How much does a solar Diya cost?

The solar diyas are currently being sold through [energyswaraj.com](http://energyswaraj.com) and cost less than Rs 250 apiece.

Will 30,000 MW of solar power pull Iran out of energy deficit?

By the Tehran bureau Iran's First Vice President Mohammad Reza Aref has announced emergency plans to develop 30,000 MW of solar power capacity as part of plans to pull the country out of its current energy deficit.

Is Iran a good place for solar power?

Iran is naturally blessed with large deserts and one of the highest amounts of sunshine in the world, and should naturally be a perfect location for large solar power production. Still, due to a combination of unwillingness to transition to green energy, low energy bills and US sanctions, the country has failed to progress and lead in the sector.

What will Iran's biggest solar park be?

The farms will supply local industries with green electricity. Once operational, the solar power plant in Kerman, in the heart of the Lut Desert, will generate 400 MW of electricity per year and become Iran's biggest solar park.

How much electricity does Iran generate a year?

According to the latest energy ministry figures, renewable power plants, including wind, solar, biomass and hydroelectric facilities with capacities of less than 10 MW, contribute only 1,101 MW, or 1.2%, of Iran's yearly electricity generation.
