Can a roof be suitable for solar panels?

Even a roof that doesn't match the ideal requirements can still be suitable for solar panels. Part of the personal recommendation provided by Solar Together will be a breakdown of any additional costs needed to cover a variety of roofs. Often, roof characteristics will instead affect the output which solar panels generate.

Can solar panels be installed on a steep roof?

Most roofs have slopes between 30 and 40 degrees, which allows solar panels to lie flush against the rooftop and produce enough energy to power your home. For homes with a steep roof, you might not be able to place panels at the optimal tilt with traditional solar racking systems.

Should solar panels be installed in landscape orientation?

Installing solar panels in landscape orientation is often the default choice for solar designers. The simplicity of design and installation, coupled with the widespread use of landscape-mounted panels in commercial installations, makes it a go-to solution for many solar projects. However, simplicity does not always equate to optimal performance.

Should solar panels be on East or west-facing roofs?

With panels on both east and west-facing roofs, you lessen the risk of shading significantly hindering your overall solar energy production. Additionally, some solar panel systems allow for individual panel monitoring and optimization, further enhancing the efficiency of an east-west setup.

What is the best orientation for solar panels in the UK?

But if you live in the Southern Hemisphere then the best orientation is north-facing. Let's look at the different solar orientations in the UK. A south-facing roof is considered the best orientation for solar panels in the UK due to the maximum exposure to sunlight throughout the day.

How long do solar panels last on a flat roof?

Most UK roofs are strong enough to hold solar panels for their entire lifespan - which can last 40 years or more. This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels.

If you're thinking about installing solar panels on your roof, you might be surprised at how many variables can affect the performance of your panels.
