solar photovoltaic technology a more viable option for renewable energy generation and energy storage. However, intermittent is a major limitation of solar energy, and energy storage systems are the preferred solution to these challenges where electric power generation is applicable. Hence, the type of energy storage system depends on the tech-

Price per kWh of storage capacity. There are various batteries available on the market, and at varying prices. If you are trying to decide between similar batteries, then the price/kWh of storage capacity is a useful way to compare different systems. AC or DC coupling. Solar PV needs an inverter, as does a battery.

Battery storage lets you save your solar electricity to use when your panels aren't generating energy. This reduces the need to import and pay for electricity from the grid during peak times. For every unit of electricity stored in a battery and used at night, it will save you around 14p. Battery storage tends to cost around £5,000 to £8,000.
