Solar panel efficiency. Solar panel efficiency is determined by testing panels at Standard Test Conditions (STC), using a temperature of 25°C and an irradiance of 1,000 W/m² - the equivalent of a sunny day with incident light hitting a sun-facing surface tilted to 37°. A solar panel efficiency of 15% with a 1m² surface area would produce 150 Watts under these test conditions.

There are no upfront costs, and instead you pay a monthly fee, which usually covers the solar panel and battery installation, repairs and maintenance. This subscription service isn't a lease or rental, meaning you'll own the panels from the outset and can benefit from smart export guarantee payments for any electricity your solar panels generate that you don't use.
