Is Italy lagging behind in patenting green technologies?

A recent report on Italy's energy system published by the National Agency for New Technologies, Energy and Sustainable Economic Development (ENEA), shows that Italy is lagging behind other European countries when it comes to patenting green technologies.

How can Italy achieve a green and ecological transition?

A deep change to achieve Italy's green and ecological transition by promoting the circular economy, the development of renewable energy sources and more sustainable agriculture. Strengthen the separate waste collection network and material treatment and recycling plants to improve the circular economy and waste management throughout the country.

How can Italy increase its solar and wind energy capacity?

To achieve these targets, Italy has set ambitious plans to further increase its solar and wind energy capacity. By 2030, Italy aims to produce at least 30% of its total energy from renewable sources, with a significant portion of this coming from solar and wind power.

Is Italy losing ground in green technology?

While countries such as Germany, France, Belgium, Denmark, Spain, Sweden are specializing on several aspects of green technologies, Italy is losing ground in all, with the exception of solar thermal (see Table 1). Italy, in other words, risks being dependent on other countries again.

What is Enea - Fondazione Leonardo - Civiltà delle Macchine ETS?

ENEA and Fondazione Leonardo - Civiltà delle Macchine ETS have signed a collaboration agreement to promote awareness of the role of technological and scientific advances for civil society and stimulate debate on its impact and benefits.

Here's a look at how it's evolving - and why Enel's solutions can aid in accelerating the global shift to green power Italy's voyage to clean power. This summer, Rome signalled its intention to cover 40,5% of the country's energy demand with renewable electricity by 2030, a 10,5% increase compared to its previous law.

Green Energy Italia è specializzata in impianti di nuova tecnologia per la casa e l'azienda. Conta su una rete di più di 350 installatori specializzati con la quale ha realizzato più di 1000 impianti fotovoltaici e 800 con accumulo in più di tre anni.

In Energy Italy lavoriamo ogni giorno per fare la nostra parte nel raggiungimento dell'obiettivo ONU Zero Emissioni entro il 2050. Realizziamo impianti fotovoltaici sia per privati che per aziende, e nel 2022 abbiamo contribuito alla non emissione di circa 735 tonnellate di CO<sub>2</sub>, grazie all'installazione di 371 impianti fotovoltaici.

Energy Storage Solutions: As Italy's renewable energy capacity grows, so does the need for energy storage to balance supply and demand. WELink has integrated Battery Energy Storage Systems (BESS) into its projects, ensuring that excess energy generated during peak sunlight and wind periods is stored for use during times of high demand or low ...

The dependence of Italy on foreign energy sources is decreasing: the share of net imports relative to gross energy availability dropped from 79.2 percent in 2022 to 74.6 percent in 2023. There was a significant decline in the imports of solid fuels (-38%), renewables and bioliquids (-22%), and natural gas (-15%).

By developing large-scale solar projects, implementing advanced energy storage solutions, and optimizing grid integration, WELink is helping Italy achieve its ambitious renewable energy goals.

GreenIT continues its growth in renewable energy with an additional 140 MW portfolio of new solar photovoltaic plants developed by Galileo. The projects will be built in three regions in Southern, Central and Northern Italy. Once in operation, they will be able to cover the electricity consumption of over ninety thousand households.
