What is Laos energy security?

Laos Energy Security (LES) is a part of the U.S. Government's initiative: "Enhancing Development and Growth through Energy" (CLEAN EDGE Asia). CLEAN EDGE Asia supports expanded access to energy, promotes energy diversification and trade and integration of clean energy markets, and strengthens energy security throughout the Indo-Pacific region.

What is USAID Laos energy security?

USAID Laos Energy Security, a five-year activity funded by the United States Agency for International Development (USAID), supports the Government of Laos (GOL)' efforts to improve the planning, policies, and performance of the Lao energy sector.

Which power companies are responsible for electricity production in Laos?

Power companies responsible for energy and electricity production in Laos include: Electricite du Laos, Glow Energy (a subsidiary of GDF Suez), Lao Holding State Enterprise and Nam Theun 2 Power Company, a consortium comprising French-owned EDF (40% ownership), Thai (35%) and Lao (25%) entities.

Does Lao PDR have a Future Energy Outlook?

This study suggests that the Lao PDR has more options with respect to its future energy outlook, including energy efficiency and conservation, reducing the TFEC by 10%, improving the efficiency of thermal power generation, promoting renewable energy, and reducing the use of fossil fuels in the primary energy supply.

How much energy does Lao PDR produce?

In 2018, the Lao PDR's total primary energy supply (TPES) was 6.38 million tonnes of oil equivalent (Mtoe), and the energy mix consisted of hydropower, oil, coal, and biomass. As there were many power plants in the Lao PDR generating electricity for export in 2018, the export figure reached 26,708 gigawatt-hours (GWh), the equivalent of 2.65 Mtoe.

What are the four main energy-using sectors in the Lao PDR?

With respect to final energy consumption by sector, like other Southeast Asian countries, the four main energy-using sectors in the Lao PDR are industry, transport, others, and non-energy. 'Others' covers subsectors such as residential, agriculture, services, and commerce.

Aside from large-scale hydro power, Laos has also significant small-scale hydro and solar energy potential. Laos adopted the Renewable Energy Development Strategy in 2011 and set a target of 30% small-scale renewable energy in the energy production by 2025; to achieve the target Laos could improve renewable energy governance, adopt a feed-in tariff, build an effective regulatory framework and facilitate market entry for foreign investors.

renewable hydrogen and ammonia as crucial energy carriers that can support the transition of Lao People's Democratic Republic (Lao PDR) towards a net-zero emissions status and sustainable ...

Laos adopted the Renewable Energy Development Strategy in 2011 and set a target of 30% small-scale renewable energy in the energy production by 2025; to achieve the target Laos could improve renewable energy governance, adopt a feed-in tariff, build an effective regulatory framework and facilitate market entry for foreign investors.

The Low Emissions Analysis Platform (LEAP) combined with the Next Energy Modeling system for Optimization (NEMO) is used to simulate 100% renewable energy integration into power systems. While many studies have been carried out using LEAP, few have utilized NEMO (the latest optimization add-on for LEAP) for analyzing net-zero pathways of the ...

By fostering a low-carbon, cost-effective energy system that meets local demands while contributing to global climate change mitigation, Lao PDR can make significant strides toward ...

Between 2013-2019, Lao Energy Systems has decreased its yearly produced Gas-power generated electricity with -31.18%, from 2242 to 1543 gigawatt hours. Estimated Generated Gigawatt Hours (2013-2019) Estimated numbers might be available if no official records has been released, or if they were added to the database before official numbers was ...

Laos' 2011 Renewable Energy Development Strategy aims to achieve a renewable energy share of 30% in total energy consumption by 2025. The policy encourages investment in renewables and small power development for self-sufficiency and grid connection.

The current study simulates the integration of 100% renewable energy into the power systems of three least developed countries: Cambodia, Laos, and Myanmar as a pathway to achieve net zero emissions. Because of the popularity of LEAP, the results it produces are comparable across countries, which is especially important when major international ...

The combustion of fossil fuels, particularly coal, is the main contributing factor to the increase in carbon dioxide (CO₂) emissions in Laos. In 2015, coal started to be consumed by the power sector. Consequently, Laos's CO₂ emissions increased sharply in 2015. The CO₂ to GDP intensity increased by 9.8% per year, from 68 kg CO₂ per thousand dollars PPP to 278 kg CO ...

By fostering a low-carbon, cost-effective energy system that meets local demands while contributing to global climate change mitigation, Lao PDR can make significant strides toward sustainable development. This approach ensures that energy policies adhere to essential environmental, social, and governance principles.

Laos" Net Zero Target. In its submission to the UN in May 2021, Laos said it aimed to achieve net-zero emissions target by 2050 and reduce emissions by 60% from business as usual by 2030 - around 62 million tonnes of CO2. The country has set a target for its power sector to reach 30% renewable energy. It has also set a conditional target of ...

commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes

The Lao PDR has been trading electricity with Thailand for many decades and has now expanded this policy to other neighbouring countries to support regional energy cooperation. Specifically, the Lao PDR will increase power exports to 15,000 MW by 2030, including 10,000 MW to Thailand and 5,000 MW to Viet Nam, Cambodia, and Myanmar.
