Starting any installation means safety first. Begin by setting up scaffolding around the area. This makes a stable platform and cuts fall risks.

As the three PV cells are connected in series, the generated output current (I) will be the same (assuming the cells are evenly matched). The total output voltage, V_T will be the sum of all the individual cell voltages added together. That is: $V_1 + V_2 + V_3 = 0.5V + 0.5V + 0.5V = 1.5V$. Then the solar cell I-V characteristic curves of our three cells example are simply added ...

Connecting solar panels together is a simple and effective way of increasing your solar power capabilities. Going green is a great idea, and as the sun is our ultimate power source, it makes sense to utilize this energy to power our homes. As solar power becomes more accessible, more and more homeowners are buying photovoltaic solar panels.
