The main disadvantage of the AC microgrids is the difficulty in the control and operation. A typical structure of AC microgrid is schemed in Figure 5. Microgrid AC can be classified into three types according to the distribution system: single-phase, three-phase without neutral-point lines, and three-phase with neutral-point lines.

The research on domestic microgrid technology started late, but microgrid technology has achieved certain achievements in China with the deepening of research and development in recent years. In terms of universities, both Tianjin University and Xi'an Jiaotong University have designed and implemented a small microgrid laboratory structure.
