How does electricity work in the Maldives?

The Maldives, being an archipelago of 26 atolls and over 1,000 coral islands, faces unique challenges in power generation and distribution. Each resort in the Maldives is essentially an individual island with its own infrastructure, including its electricity system. The primary source of electricity in the Maldives is diesel generators.

What is the primary energy conversion in Maldives?

In Maldives, the primary energy conversion is from diesel energy to electricity. Nearly 100% of all electricity produced in Maldives comes from diesel-based systems. The generation and distribution of electrical systems are decentralized, with each separate island operating a self-sustaining diesel power generation and distribution system.

Can solar power be used in the Maldives?

While diesel generators are the primary source of electricity, the Maldives is also exploring renewable energy options. Given the abundance of sunlight the islands receive, solar power is a promising alternative.

Does Maldives have an electrical power system?

All power systems and electrical installations in Maldives must comply with the regulations of the Maldives Energy Authority. No interconnection between the islands exists as of today. Both public utility companies (FENAKA and STELCO) are owned by the Ministry of Finance.

What is the main energy source in Maldives?

In Maldives, the main energy source is imported fossil fuel (99.9%), with the bulk being diesel. This fuel is used primarily for electricity production and transportation.

Is biomass a source of electricity in Maldives?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Maldives: How much of the country's electricity comes from nuclear power?
