What size inverter for a 5 kW solar array?

For example, a 5 kW solar array typically requires a 5 kW inverter. However, factors like derating, future expansion plans, and the array-to-inverter ratio influence the optimal inverter size. Most installations slightly oversize the inverter, with a ratio between 1.1-1.25 times the array capacity, to account for these considerations.

What is a solar microinverter?

A microinverter is a device that converts the DC output of solar modules into AC that can be used by the home. As the name suggests, they are smaller than the typical solar power inverter, coming in at about the size of a WiFi router. Microinverters are usually placed under each solar panel, in a ratio of one microinverter for every 1-4 panels.

What is inverter sizing?

The process of inverter sizing involves understanding the relationship between DC (Direct Current) from the solar panels and AC (Alternating Current) required for powering appliances. The Inverter Sizing Formula is -
$$\text{AC Inverter Capacity (kW)} = \text{DC Input Power (kW)} / \text{Inverter Efficiency (\%)}$$
