

What energy sources are available in Myanmar?

Myanmar is endowed with rich natural resources for producing commercial energy. Currently, the available energy sources in Myanmar are crude oil, natural gas, hydropower, biomass, and coal. Wind energy, solar, geothermal, bioethanol, biodiesel, and biogas are other potential energy sources.

How much electricity does Myanmar need?

According to the Ministry of Electricity and Energy, by 2030 hydropower will be able to respond to 38 percent of the total energy demand, domestic natural gas 20 percent, domestic coal four percent and other renewable energy sources nine percent. Therefore, Myanmar still needs 29 percent of total electricity supply for the whole country (See Figure

Is Myanmar a renewable or non-renewable country?

Myanmar relies on both renewable and non-renewable energy to supply electricity to its people and to develop the economy.

What is Myanmar's energy policy?

Use of new and renewable energy sources is encouraged, especially solar and wind, which are abundant in Myanmar. The policy also accepts that people will still need to use traditional energy sources such as wood and charcoal. Regulations and anticipatory actions are necessary to sustain the harvesting of these primary energy sources.

What is the Energy Outlook model for Myanmar?

The current energy outlook model considers the mitigation actions and policies of Myanmar in the energy sector, as specified above. These include potential savings of 12% with respect to electricity and 20% in the transport sector by 2050. The following energy sector mitigation actions and policies are represented in the APS:

What is Myanmar doing about energy efficiency & conservation?

To this end, Myanmar has implemented a range of energy efficiency and conservation goals and action plans targeting energy savings in all sectors of the economy and in cooperation with both the private and public sectors.
