

Energy consumption and energy production are visible via a simple and clear visualization. In addition to the distribution of energy, the savings are also shown daily, monthly and yearly. E-Smart makes all energy flows from the power grid through photovoltaics, battery storage, e-mobility to heat pumps and electric heating elements visible.

But also the 50,000 kWh, which are obtained directly from a photovoltaic system and the 100,000 kWh, which are obtained indirectly from the solar energy via four heat pumps, are an important part of the M-TEC concept.

More and more house builders, companies, architects and property developers are recognizing the opportunities of an overall energy solution instead of individual solutions. This smart combination of photovoltaic system, heat pump, battery storage and charging stations for e-mobility opens up considerable potential for savings for the energy transition.

Energy-Charger is one of the most CO2-optimised wallboxes on the market. The modular design ensures future-proofing: upgrades or possible repairs can be carried out particularly easily. The Energy Charger is easy to install and operate. Both models can be connected directly to the M-TEC E-Smart energy management system via a network.
