

Optima energy systems Costa Rica

What is the Energy Outlook for Costa Rica?

This information is based on IEA analysis carried out within the framework of Latin America Energy Outlook 2023. Costa Rica Energy Profile - Analysis and key findings. A report by the International Energy Agency.

Can Costa Rica achieve a fully decarbonised energy system?

This policy roadmap complements the study "100% Renewable Energy for Costa Rica - A decarbonisation roadmap" by the University of Technology Sydney - Institute for Sustainable Futures. It aims to provide policy pathways for Costa Rican to achieve a fully decarbonised energy system in Costa Rica.

What is the energy system like in Costa Rica?

Currently, the energy system in Costa Rica is heavily centralised, with the Costa Rican Electricity Institute (ICE), the state-owned power and telecoms provider, by law being the only actor obligated to provide electricity to all sectors and parts of the country.

What is Costa Rica's energy policy?

Costa Rica's energy policy aims to move from a fossil fuels based energy system towards renewable energy sources and to expand its power generation capacity, replacing old power generating stations and developing new projects.

Does Costa Rica use biomass?

Today, renewables meet around 60% of Costa Rica's energy demand for heating, with the main contribution coming from biomass. Different studies put the sustainable use of biomass potential in Costa Rica at different levels--between 580 MW and 2,530 MW.

How can Costa Rica improve spatial and energy planning?

In a similar manner it is important to foster cooperation between urban and rural local governments in Costa Rica and to increase the role of regional planning in spatial and energy planning. Similar to partnering with institutions, a collaboration mechanism for sharing energy between regions could be implemented.

The captured energy is subsequently stored in an innovative battery system, the only of its kind in Costa Rica. The project exceeds \$2M in investment. This system allows for the implementation of 4.3 MWh (1.5 MW Peak) in storage ...

GOAL: to promote an understanding, on a global scale, of the dynamics of change in energy systems, quantify emissions and their impacts, and accelerate the transition to carbon-neutral, environmentally benign energy systems while providing affordable energy to all.
