How did solar power start?

Our journey with solar power goes back thousands of years, beginning with our ancestors harnessing the sun's energy for warmth and sustenance. Early civilizations revered the sun, recognizing its power to grow crops and provide light.

When were solar power plants invented?

Commercial concentrated solar power plants were first developed in the 1980s. Since then, as the cost of solar panels has fallen, grid-connected solar PV systems' capacity and production has doubled about every three years.

Why was solar energy invented?

This was to ensure buildings gained the most heat. The world's first 'solar collector cell' was designed and constructed in 1767. Swiss scientist Horace-Benedict de Saussure (above) made the discovery when heat power, mainly steam, was tested. He constructed an insulated box with an opening and three layers of glass.

Who invented solar panels?

About four decades later, American inventor Charles Fritts created the world's first rooftop solar array in New York in 1883, one year after Thomas Edison opened the world's first commercial coal plant. Fritts coated the panels with selenium to produce a very weak electric current.

When did solar power become a popular technology?

Solar power was the flagship technology. At the turn of the century, large domestic and commercial solar initiatives were in play. In 2004, Governor Arnold Schwarzenegger proposed a scheme for 1 million solar roofs. Germany and other nations had developed a highly successful domestic solar PV market. 2006 saw widespread news coverage.
