

Does home assistant support network storage?

Even better: You can use it as a target for your backups so that when Home Assistant creates a backup for you, it will store it directly on your network storage. Multiple network storages are also supported; if you like, you can easily add more.

Where should a home assistant backup be located?

Of course, the backup location must be placed on the NAS mount that has just been created. A very popular method for Home Assistant backups is the Google Drive Backup plugin. This add-on automatically synchronizes your Home Assistant backups with your Google Drive account. It offers a simple and reliable solution for backing up your data off-site.

Should I store backups outside of home assistant?

Storing backups outside of Home Assistant makes sure they don't use space on Home Assistant to begin with. It also makes sure you can restore Home Assistant from backup in case you have an issue with your current installation.

How do I backup my Home Assistant data?

When you are ready with the backups, boot your Home Assistant OS from the SD card as usual and connect the SSD drive to any of the blue USB ports (USB 3.0) on your device, as they are faster. Open your Home Assistant web interface and go to: Settings > System > Storage > Three Dots Menu (upper right corner) > then select Move data disk.

How do I backup my Home Assistant external data disk?

Create a backup & download it first, before continue with the Home Assistant External Data Disk move procedure. When you are ready with the backups, boot your Home Assistant OS from the SD card as usual and connect the SSD drive to any of the blue USB ports (USB 3.0) on your device, as they are faster.

What's new in home assistant?

This long and highly requested feature is now available when running the Home Assistant Operating System. In the Settings > System > Storage menu, you can now find a whole new set of controls to connect to your storage and use it to, for example, use your network share as a media source in Home Assistant.

Ok I tentatively have something working with a VM running HassOS to represent the Home Assistant Green and here was my process in case anyone is curious:.. Created a USB for udev loading based on the thread located here: [SOLVED] Mount USB drive in Hassio to be used on the Media Folder with udev customization Formatted the external drive ...

Apparently there are now three frontend modes, storage, auto-gen, and yaml. I seem to be "stuck" in auto-gen

Do you have a network storage in your home? Like a QNAP or Synology NAS? This release adds the ability to add and use that storage with Home Assistant! This long and highly requested feature is now available when ...

Hi, My Home Assistant storage is regularly full, so I have to delete some backups to continue using it. My first thought was that frigate was using most of the space, but after deleting all of the clips, snapshots and recordings my storage is still 90% full. According to frigate the "recording & snapshots" location is using 103GB+.
