The renewable energy revolution is underway, but solar power, already the world's fastest-growing energy source, must become even cheaper and easier to manufacture to meet our climate challenge. Tandem PV is leading the charge by developing a more powerful, durable and affordable solar panel to speed the commercialization of perovskite technology.

In less than 15 years, the maximum efficiency of perovskite solar cells has risen from 3.9% to 25.7%. [ref NREL] For context, most solar panels you find today are crystalline silicon (c-Si) solar cells, and it took 37 years for C-Si solar cells to achieve comparable efficiencies.
