For example, let's look at a 200-watt solar panel with six peak sun hours: 1 x 200-watt solar panel x 6 hours = 1200 Wh; 2 x 200-watt solar panel x 6 hours = 2400 Wh; So for the computer using 2400 Wh a day mentioned above, you would need two such solar panels. Likewise, you would need four 100-watt solar panels to power your computer.

Once your solar panel is installed, the next step is to connect it to your computer. This is usually done with a special cable that comes with your solar panel kit. If you are using a fixed solar panel on your roof you will need to use an inverter to convert the DC power from your solar panel into AC power that your computer can use.
