You should know that there are limitations for series solar panel wiring. In the U.S., solar strings are required to feature a maximum voltage of 600V, so solar arrays comply with article 690 section 7 of the National ...

It's not the real voltage of the solar panel. You want the maximum power voltage or V_{mp} , which should be listed somewhere in the specs. If we assume the V_{mp} for the 200W solar panel is 20.5V, we can calculate amps this way: $200W/20.5 = 9.7A$. The solar panel produces 9.7 amps at maximum power output. Does more amps mean more power?

The most important solar panel specifications include the short-circuit current, the open-circuit voltage, the output voltage, current, and rated power at 1,000 W/m² solar radiation, all measured under STC.. Solar modules must also meet certain mechanical specifications to withstand wind, rain, and other weather conditions. An example of a solar module datasheet composed of ...
