This study examines the pullout behavior of steel piles used as foundations for solar panels in Shahrebabak city, Iran. The site's geotechnical characteristics were assessed through 15 boreholes using the wash boring method. A total of 40 tests were conducted, evenly divided between UNP 120 and UNP 100 piles, to record penetration rates under constant ...

Due to the large span of the PV bracket, every two helical piles are spaced relatively far apart, typically more than 20 times the pile shaft's diameter, allowing the group pile effect to be ignored. Therefore, for an in-depth study of the helical piles' bearing performance under horizontal cyclic loadings, a single helical pile is chosen for the analysis.
