

What is the energy transition in Poland?

Wholesale energy prices in Poland compared to other EU countries remain very high, and the economy's dependence on imported fossil fuels is growing rapidly. In the latest, seventh edition of the "Energy Transition in Poland" report, Forum Energii presents the state of transition play and a broader look at the overall process.

Does Poland's ntcp rely on coal?

The updated NECP (WAM) is still under negotiation and it could face challenges due to Poland's reliance on coal. However, the government's commitment to renewable energy signifies a shift towards sustainability.

What is Poland's ntcp?

As required by the EU, Poland's NECP outlines its strategic vision for energy and climate. The plan includes a promising baseline scenario and an even more ambitious "With Additional Measures" (WAM) scenario, soon to be submitted to the European Commission.

How will Poland's ntcp impact energy production?

Poland's NECP aims to exceed EU goals in RES share in electricity generation but falls short in total energy consumption, heating and cooling, and greenhouse gas reductions. Energy production from coal is expected to decrease dramatically from 61% in 2023 to only 22% by 2040, creating more room for alternative energy sources.

What happened in Poland's energy transition in 2023?

Poland's energy transition is progressing, and 2023 was a year of real records. Although coal remains the main source of electricity production, its share in the mix fell to an all-time low of 60.5%, down 10 p.p. from a year earlier. Production from RES reached 27% for the first time.

Why is energy production increasing in Poland?

At the same time, energy production from natural gas increased, by more than 40%. This is a result of falling fuel prices and the flexibility of gas generation. Wholesale energy prices in Poland compared to other EU countries remain very high, and the economy's dependence on imported fossil fuels is growing rapidly.

Wholesale energy prices in Poland compared to other EU countries remain very high, and the economy's dependence on imported fossil fuels is growing rapidly. In the latest, seventh edition of the "Energy Transition ...
