For up to 72 hours following a power outage or power failure, the RAID battery backup unit (BBU) protects the integrity of any data residing on the MegaRAID controller. Important: The RAID BBU is internal and cold-swappable. Before you begin, review the information in TS7620 ProtecTIER Electrostatic discharge procedures.

- A customized 240-pin DIMM module that contains a RAID key, which contains hardware needed to use advanced MegaRAID features - A remote intelligent transportable battery backup unit (iTBBU) The intelligent Transportable Battery Backup Unit (iTBBU) protects the integrity of the cached data on the DIMM by providing backup power if

3ware provides the ability to perform a so-called "battery test" with their RAID controllers. This test serves to determine the precise capacity of the battery and thereby determine an estimated value for the potential backup duration during a power failure.

A raid battery pack is a necessity depending of the cache configuration of your Raid array. If you happen to use Write-back (when the controller informs the Os the data write was successful while still in cache, in opposition to write-through when the controller waits for the data to be on disk), you could lose crucial data should power fail ...
